

**Prototypes within
48 hours**

PERFECT PRODUCTION

... served well.

Speed

Flexibility and speed are of vital importance, especially in the intense phase of development or directly before a trade fair. The rapid realization of a product is your competitive advantage. Use our flexible production to bring your product onto the market quickly.

Teamwork

Our production team supports you in the selection and purchasing of materials and circuit boards.

Involve us at an early stage in order to guarantee a quick realization of your project. The use of cost-effective pattern templates ensures a process which is close to serial production.

Optimal realization with preparation:

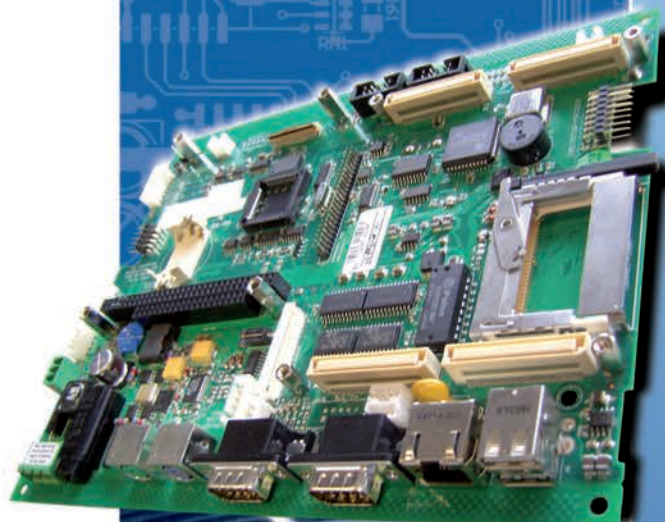

- **Provision of material**
(20.000 items in stock)
- **Circuit board**
- **Technical documentation:**
 - *placement plan / bill of materials*
 - *position data*
 - *paste data*

Elektronik

50
Years
Innovation

1974 R&D 2024

We do it.

Elektronik

We do it.

Circuit boards, assemblies, control panels and devices

Development

From circuit board routing to hardware and software development of complex systems.

Material procurement

Favourable material procurement with logistics advantage directly from our warehouses or through our central purchasing department. Alternatively material provision by clients.

Electronics production

SMD and leaded (THT) assembly in an ESD-compliant environment, from prototype to series production in RoHS-compliant or conventional 'leaded'.

Assembly

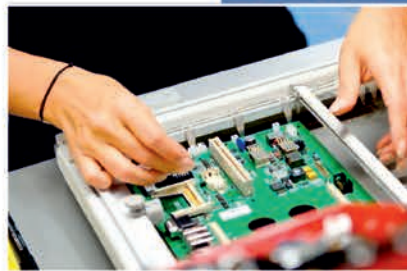

Cable assembly and installation of modules, assemblies and complete end devices.

Quality assurance

Testing by means of automatic test systems, e.g. AOI, ICT etc., documentation, functional testing and environmental simulation.

Shipping

Packaging, labelling and dispatch (individual or collective despatch).

Certified according to UL ZPVI 2/8  US E337151
Quality management according to DIN EN ISO 9001:2015
